

Introduction to Machine Learning

Overview of ML fundamentals.

Chapter 1: Foundations

Machine learning is a subset of artificial intelligence that enables systems to learn from data.

1.1 Supervised Learning

Supervised learning uses labeled training data to learn mapping functions.

1.2 Unsupervised Learning

Unsupervised learning discovers hidden patterns in unlabeled data.

Chapter 2: Applications

Machine learning applications span many industries.

2.1 Natural Language Processing

NLP enables computers to understand and process human language.
